Senior IT Infrastructure Engineer (f/m/d)

This position is based in Rennes, France.

IDnow France is strengthening its in-house IT team and is looking for its future Infrastructure Engineer. As part of a team split between France and Germany, you will be involved in MCO and technical implementation.

Main Role and Tasks

- Maintaining, monitoring and expanding the Internal IT managed network and infrastructure systems across multiple locations (France and Germany) both on-premises and/or in the cloud.

- Participation in Internal IT and/or cross-functional/cross-office projects with other DevOps, Security and Production Infrastructure teams.

- Configuring and maintaining our network systems, Office Internet Connections, Wi-Fi and firewalls.

- Physically maintain our Servers, Switches, NAS, Firewalls, Access Points.

- Maintaining our virtualization environments (Proxmox and VMware ESXi)

- Automating our environment

We Offer

- Up to 2-days of remote working per week

- Flexible work time with a core hours system

- 20 additional days of workation: Work remotely from anywhere in France

- 12 additional days off Access to an e-learning platform

- Health insurance

- 50% reimbursement of public transportation subscription

- Bonus for green mobility

- N3 support for incidents logged within our ticketing platform

- Create and maintain systems configuration documentation, including creating network diagrams.

- Working with the Security team to maintain Internal IT systems to support and reflect the security standards and policies of the company.

- Proactively contribute to knowledge transfer to the Level 1 and Level 2 support teams, with the aim of moving repetitive and well documented tasks to these teams.

That Describes You

Personal:

- Bachelor's degree in Computer Science, Engineering, or you completed an IT-professional training or a comparable qualification in the IT field

- 5-7 years of work experience in IT Administration/IT Infrastructure
