Senior IOS Developer (f/m/d)

As an iOS mobile developer, you will be involved in the evolution and maintenance of the automatic identity document capture tool used directly by our clients and within our core applications.

Main Role and Tasks

You will be part of our mobile team of 5 people:

Tasks:

- You participate in the elaboration of detailed technical and functional specifications.
- You will design and develop the new features of the service (Design/Development/Testing of expected features)
- You validate the correct operation through the realization of automated tests
- You provide support to the people in charge of customer support (CSM/Sales)
- You will evaluate work procedures and make proposals to optimize them
- Eventually, it will be possible for you to lead and be responsible for the application domain entrusted to you around a strong technical culture and agile method

We Offer

- **Health & Wellbeing:** Use your full access to Nilo.Health, including 1on1 sessions
- **We value personal and professional development:** make full use ot the training Platform Udemy!
- A supportive feedback-based culture where **respect and integrity** guide us in what we do
- **We make your remote work comfy:** we provide support on equipment and offer flexible working hours; we help you collaborate and connect with your colleagues both locally and remotely

- The stack:

- Swift, Objective-C, UIKit, SwiftUI

- iOS 12 and more

- XCode, Cocoapods, Swift Package Manager

- Continuous integration: Fastlane, Git, Sonar, Jenkins
  Identity and access system (OAuth2 standards,
  Open ID Connect, Keycloak, …)
  Design System, Figma, Lottie

That Describes You

You have at least 4 years of successful experience in iOS development in an Agile team (Scrum, Kanban) and in a continuous integration context. Ideally, you are aware of documentation writing (technical or tests).

Technical skills which are a "must":

- App publishing experience

- Good knowledge of the iOS platform
  (Swift/Objective C) and the Apple ecosystem
  Knowledge of architectural patterns (MVVM, MVI)

- Experience with web services (JSON, XML)

- Experience with build automation tools (Jenkins,
  Fastlane)

- Experience with Continuous Integration, Continuous
  Delivery

- Experience with 3'rd part libraries and SDK
  integrations

- Culture of testing (unit, instrumentation) and
  sensitivity to code coverage

- Skills, we'd like you to have, but that can be
  improved or learned in the first few months:

- Application security/low-level optimization skills

- Experience with Swift UI

- UX/UI sensitivity

- Ability to read and understand C/C++ code

- Knowledge of collaborative tools JIRA, Confluence
  Security (App shielding, Strongbox, Secure Element,
  TEE, Cryptography, Certificates, Signature)

Challenge accepted?
Then I'm looking forward to hearing

- Skills considered to be a plus:
  Cross-platform technologies knowledge(React-Native, Flutter)
  Image Processing knowledge(openCV, openGL)

from you!
